The value shown for the products constitutes the gross amount received by the producer at the production point, no deductions being made for commission or expenses.

REVIEW

The production of processed fishery products (canned, packaged fresh and frozen, cured, and industrial) in the United States, American Samoa, and Puerto Rico was valued at a record $1.1 billion in 1965. This was an increase of 16 percent compared with the previous year. Canned products accounted for 44 percent of the total value; packaged fresh and frozen, 44 percent; cured, 5 percent; and industrial products, 7 percent. The Pacific Coast States led in production with products valued at $405 million followed by the Gulf States, $208 million; New England States, $149 million; and the Middle Atlantic States, $97 million. There were 86,864 persons directly employed in 4,185 wholesaling and processing establishments.

The pack of canned fishery products was 38.3 million standard cases (1.1 billion pounds) valued at $495.2 million--an increase of 2.6 million cases and $58.6 million. The gain in production resulted mainly from a record pack of tuna and larger packs of Maine sardines, clam products, animal food, and shrimp. The packs of salmon, mackerel, Pacific sardines, and oysters were smaller than in the previous year. The value of three items--salmon, tuna, and animal food--accounted for 81 percent of the total value received by packers.

Fresh and frozen packaged fish and shellfish (fillets and steaks, fish sticks and portions, shrimp and other shellfish products, specialty dinners, etc.) had spectacular growth in 1965 and were valued at a record $485.7 million.

Production of cured fishery products amounted to 74.4 million pounds valued at $54.2 million compared with the previous year's output of 65.5 million pounds valued at $47.8 million.

Industrial products were valued at $82.8 million in 1965--an increase of $12.9 million compared with 1964. Meal and scrap production amounted to 254,051 tons--8 percent larger than in the previous year. Production of oil increased from 180.2 million pounds in 1964 to 195.4 million pounds in 1965. Other important industrial products included fish solubles, shell products, agar-agar, animal feeds, seaweed products, fish leathers, fertilizers, and pearl essence.

Production of processed fishery products include items manufactured from raw products imported from foreign countries. Certain items, such as salted alewives, cured salmon, steamed oysters, etc., are shown in an intermediate and also a more advanced stage of processing. Production cannot be correlated directly with the domestic catch.

Created in 1849, the Department of the Interior--a department of conservation--is concerned with the management, conservation, and development of the Nation's water, fish, wildlife, mineral, forest, and park and recreational resources. It also has major responsibilities for Indian and Territorial affairs.

As the Nation's principal conservation agency, the Department works to assure that nonrenewable resources are developed and used wisely, that park and recreational resources are conserved for the future, and that renewable resources make their full contribution to the progress, prosperity, and security of the United States--now and in the future.
